

CCCC Early Childhood Learning Center

This 9,000 square foot wing of the Cankdeska Cikana Community College consists of 2 infant care rooms, 2 toddler care rooms, 2 pre-school class rooms, a kitchen, cafeteria, conference room, multi purpose room and staff office space.

Bergstrom Electric installed the 600 amp 120/280 volt three phase main electrical service, two main subpanels and a lighting control panel, as well as a 100 amp floor heating panel for the multi-purpose area. Bergstrom also made some recommendations to the owner, adding a fire alarm system, surge suppression to some panels, and more exterior lighting to make it easier to see outside. And although it wasn't specified in the plans, Bergstrom also upgraded to new tamper-resistant outlets in all areas where children could be to help prevent accidents, at no cost to the owner.

The project involved about 6,000 feet of conduit, 30,000 feet of wire, and 150 light fixtures. Bergstrom started on the project in January of 2010 and it was substantially complete by August of that year. It took about 1500 man-hours to complete the work.

Fort Totten, North Dakota

Electrical Construction: \$135,000

Year Completed: 2010

Project Manager: Darin Hall

Project Foreman: Jared Swanson

Architect: SAB Architects

Owner: Spirit Lake Nation

"Jared Swanson and Lewis Jenson were our main guys on the job. They really stepped up and took on the responsibility of getting this done right," noted Darin Hall, Project Manager.
