

# Riverview Health Clinic Addition

## Crookston, Minnesota

**Electrical Construction:** \$69,000

**Year Completed:** 2008

**Project Manager:** Dale Hagen

**Project Foreman:** Justin Swanson

**Architect:** EAPC

**General Contractor:** CD, Inc. of Grand Forks

This 2,856 square foot, single story addition to the Riverview Health Clinic and Hospital in Crookston included a new nurses station, exam rooms and offices as well as 900 square feet of remodeled offices, exam rooms, and a waiting room. The project required extensive site work, including the rerouting of watermain and sewer, the demolition of the existing Emergency Room garage, and an asphalt pavement replacement.

Bergstrom started work on the project in October of 2007. The electrical components included a 480/277 volt and a 120/208 volt branch panels that fed off the existing electrical system. The biggest challenge for the Bergstrom team was working among Riverview's patients and

staff, who continued to use the building throughout the project, and ensuring their safety at all times.

It took a total of 745 man-hours to complete the project, which was finished on April 26, 2008.
