

Turtle Creek Apartments

Belcourt, North Dakota

Electrical Construction: \$97,000

Year Completed: 2011

Project Manager: Darin Hall

Project Foreman: Steve Cuiffini

Architect: David Larson
& Associates

This was a basic residential project, consisting of 8 one-bedroom apartments in Belcourt, North Dakota. Bergstrom Electric teamed with Decouteau Electric to provide electrical contracting services.

The project started late, due to weather delays, and also encountered bad soils in the area which delayed the start of footings and foundations and impacted the entire project schedule. Bergstrom adjusted accordingly and started work in July of 2011.

The project called for a three-phase 800 amp main service with one 200 amp house panel serving the common areas of the building and eight 125 amp apartment panels. There was also a 400 amp offpeak service for heating.

It took Bergstrom approximately 900 man-hours to complete the project, which was done in February of 2011.
